You Will Need...

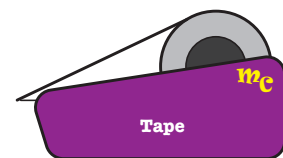

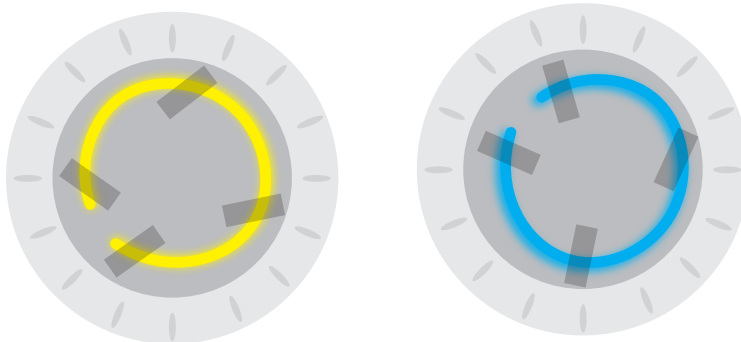

1. First, lay both plates on the table as if you were going to eat.

2. Next, activate the glow sticks.

3. Third, tape the glow sticks to the plate. The glow sticks should be placed where food would be arranged if you were going to eat.

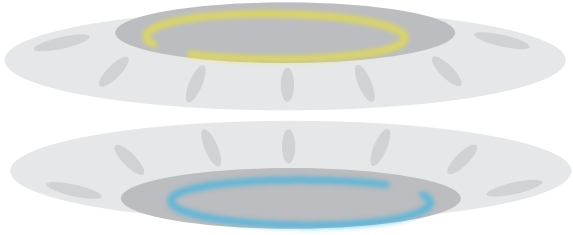

Flying Glow Disc

4.

Now, take the two plates and put them together with the glow sticks on the 'inside' of the two plates.

5.

Take the decorative tape to attach the two plates together.

6.

Finally, take your flying disc outdoors and give it a try. If it does not fly well, you might need to counterbalance the glow sticks on the inside. If so, take the flying disc apart and readjust the glow sticks to achieve better balance, allowing the disc to glide nicely through the air outside.
