

Apple Core Magnet

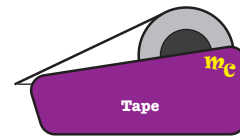

<https://youtu.be/ptRIO3RxNtw> | <https://www.chuckhartman.com>

You Will Need...

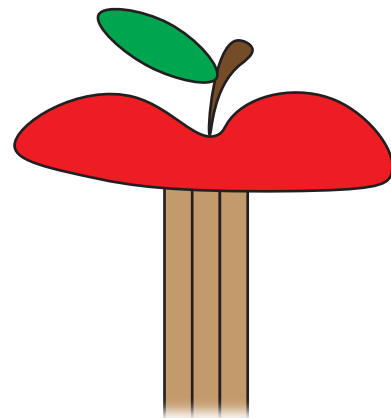

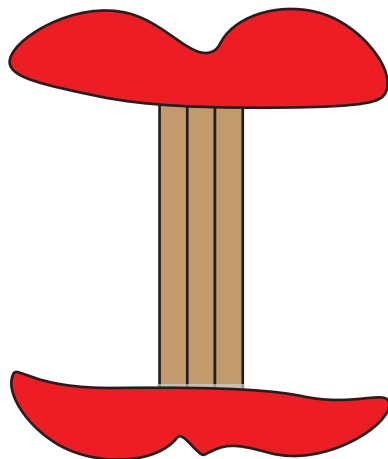

1.

Start by taping the three popsicle sticks together at the top and bottom.

2.

Next with scissors cut the shape of an apple top and bottom from a piece of red construction paper. **REMEMBER!** *Any time a child uses scissors, there must be an adult present.* Then cut an apple stem from brown construction paper and a leaf from green construction paper. Now, attach the apple top and bottom to the three popsicle stick. It is as if the popsicle sticks are the apple core. Then attach the stem and leaf.

Apple Core Magnet

3.

Finally, with a black marker draw some seeds on the core and definition on the leaf. Then attach the magnet to the back of the apple core. Once the rubber cement (or glue) dries, attach your magnet to the refrigerator and enjoy.
